Study Name	Study Rationale	Status
KalVista Diabetic Macular Edema	A randomized sham-controlled double-masked Phase 2a study of the efficacy, safety and tolerability of the intravitreal plasma kallikrein inhibitor, KVD001, in subjects with center-involving diabetic macular edema (ciDME) who have had prior anti-vascular endothelial growth factor (VEGF) treatment (6 months)	Open
Opthea OPT-302-1002 Diabetic Macular Edema	A dose-ranging study of intravitreal OPT-302 in combination with ranibizumab, compared with ranibizumab alone, in participants with neovascular age-related macular degeneration (wet AMD)	Open
Roche/Genentech Yosemite GR40349	A Phase II, multicenter, randomized, active treatment – controlled study of the efficacy and safety of the Ranibizumab port delivery system for sustained delivery of Ranibizumab in patients with subfoveal neovascular - Age-Related Macular Degeneration.	Open
Santen BLA-STA- 07418 Wet AMD	A multicenter, randomized, double masked and active controlled Phase 2 study assessing the efficacy and safety of intravitreal injections of DE-122 in combination with Lucentis compared to Lucentis monotherapy in subjects with wet age-related macular degeneration-(6 month trial)	Open
Chengdu Panda Wet AMD	A multicenter, double-masked, randomized, dose-ranging trial to evaluate the efficacy and safety of Conbercept Intravitreal Injection in Subjects with Neovascular Age-related macular degeneration. (2-year trial)	Open
